Bristol Underground Metro

A presentation to the West of England Combined Authority

By Professor Colin M Eddie FREng

3 August 2023

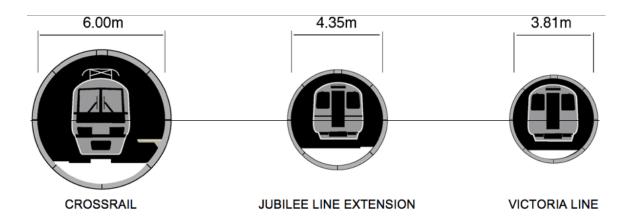

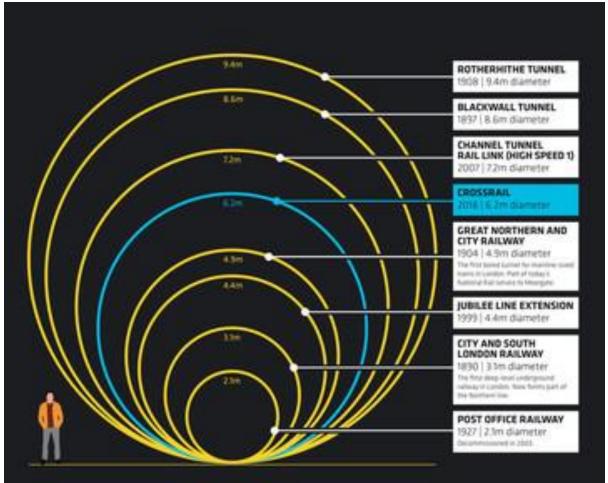

- Who am I and why am I here?
- UK's track record of delivering major infrastructure projects
- How can <u>YOU</u> do better
- The feasibility, cost and time of an Underground Metro in Bristol
- Discussion

City	2023 Population
London	8,961,989
Birmingham	984,333
Liverpool	864,122
Sheffield	685,368
Bristol	617,280
Glasgow	591,620
Leicester	508,916
Edinburgh	464,990
Leeds	455,123
Cardiff	447,287
Manchester	395,515

Tunnel Size?

Glasgow Underground (3.5m Excavated Dia.)

The subway system was constructed as a circular loop almost 6+1/2 miles (10.5 kilometres) long and extends both north and south of the River Clyde. The tracks have the unusual narrow gauge of 4 ft (1,219 mm), and a nominal tunnel diameter of 11 ft (3.4 m), even smaller than that of the deep-level lines of the London Underground (11 ft 8+1/4 in or 3.56 m at their smallest); the rolling stock is considerably smaller.

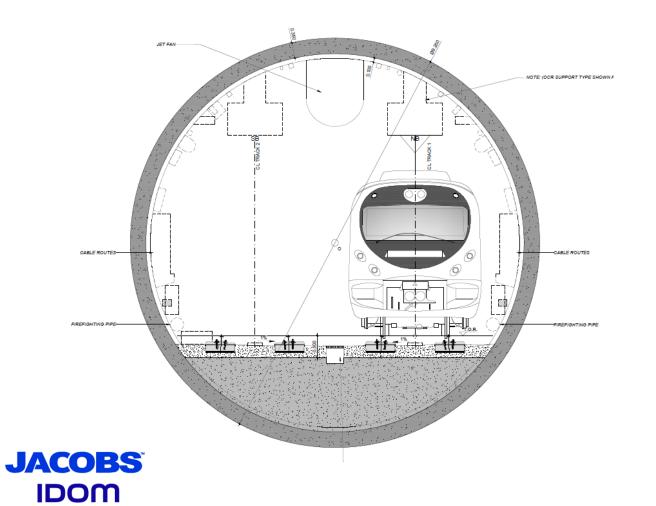

The system is described as two lines, the Outer Circle and Inner Circle, which simply refers to the double track, having trains running clockwise and anticlockwise respectively around the same route in separate tunnels. Stations use a variety of platform layouts including single island platforms, opposing side platforms and in some stations such as Hillhead one side and one island platform.

Dublin Metrolink

Dublin Metrolink (9.5m Excavated Diameter) Twin Track

West of England Combined Authority -Underground Metro

Prepared for Bristol City Council as the Lead Authority

October 2017

4.6.3 Below Ground Stations

4.6.3.1 Station Depth

The running tunnels are assumed to have a 5.2m internal diameter (ID) with 0.4m thick tunnel lining meaning their outside diameter (OD) is approximately 6m. Following good tunnelling practice, it has been assumed that for the majority of tunnelling the clearance above the tunnels will be close to twice the tunnel diameter so a clearance of 10m has taken. Including a 0.5m gap below the tunnel to drive or transfer the Tunnel Boring Machine through the station means that the top of the foundation slab at stations needs to be approximately 16.5m below ground level (BGL). With a foundation slab assumed to be up to 1.5m deep the depth of the station box is 18m BGL and the platform is approximately 13m BGL:

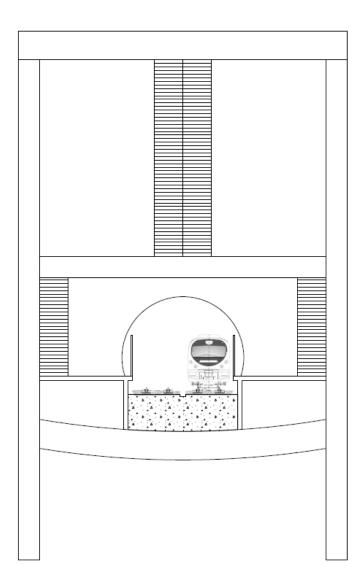

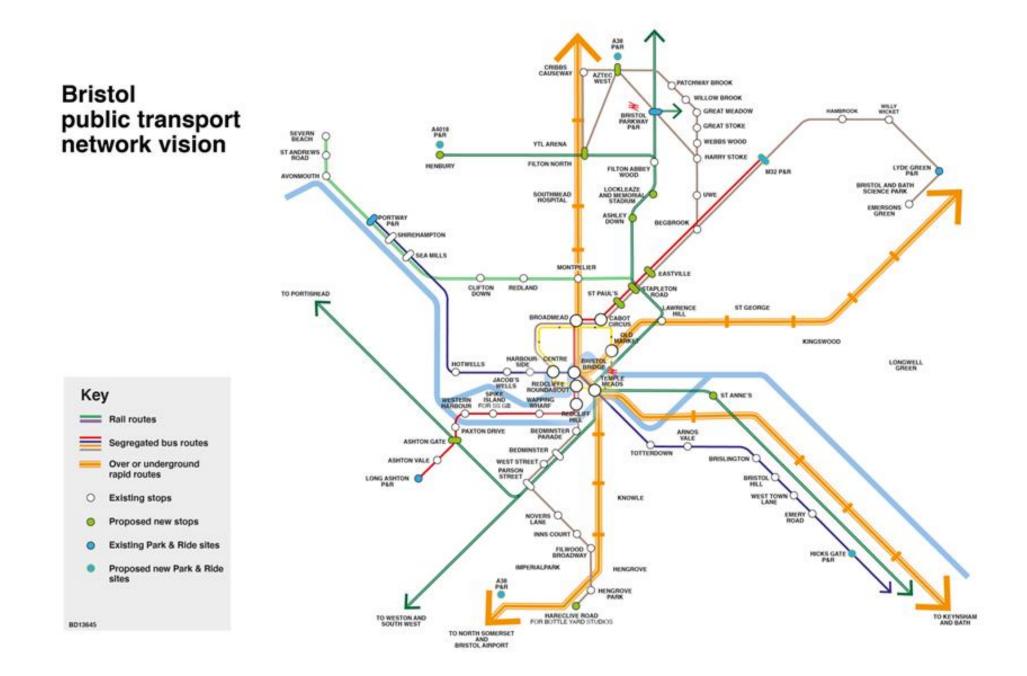

Figure 4.5 – Typical Station and Cross Section

The diaphragm walls (D-walls) are assumed to be 1m thick and constructed to a depth of approximately 25-30m deep depending on the ground conditions. We have assumed 1.5m thick to a depth of 35m

Standard Station Design

• 100m x 20m

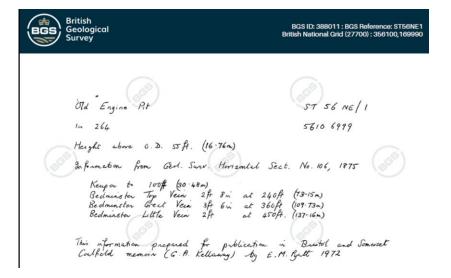

Tunnel Options used for Pricing Purposes

Project	Internal Dimater (m)	External Diameter (m)	Excavated Diameter (m)	Lining Thickness (mm)
Single Tunnel - Twin Track	8.50	9.20	9.50	365
Twin Tunnel - Single Track	5.20	5.80	6.05	300

Route	Tunnel
	Length (m)
1 - Airport	9064
2 - North	14153
3 - North East	10630
4 - South East	7603

Ground Conditions at Tunnel Horizon and associated Geo-hazards

- Ground Conditions
 - Weak sedimentary rocks (Mudstone / Sandstone / Limestone).
 - Moderate to low water pressures
 - Coal measures (and therefore mine workings) <u>unlikely</u> to be encountered
- Geo-Hazards
 - Stickiness and breakdown of the weak rock
 - Abrasion in the Sandstone

Key Assumptions

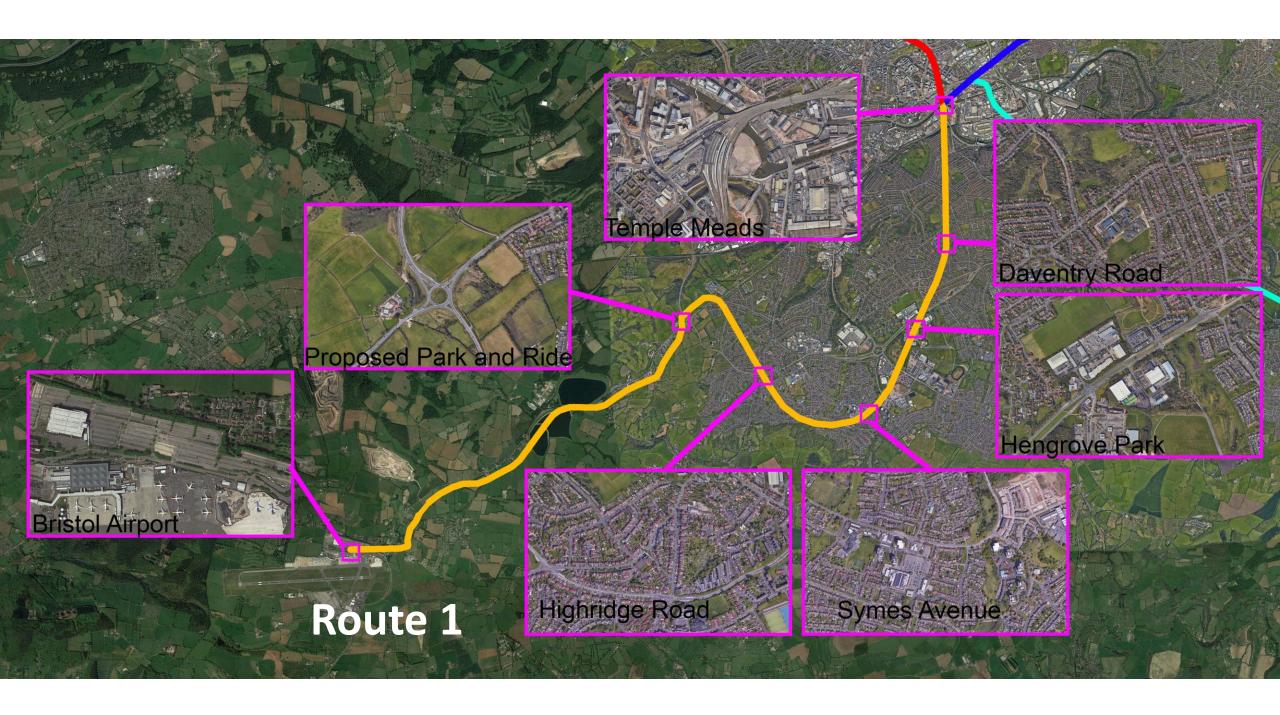

- Design completed before Contractor Procured
- Planning approvals in place before Contractor Procured
- Tunnels for each route will be constructed from the farthest underground station to Bristol Temple Meads
- A single JV is selected to build <u>everything</u> on each route (to eliminate interfaces)
- Standardised tunnel and station designs are utilised throughout
- All tunnels will be constructed using Slurry TBMs, with continuous mining capability and a single pass, twin gasket, boltless tunnel lining
- Stations (100m by 20m) will be constructed within diaphragm walls
- A suitable spoil disposal facility will be identified which is relatively close to each drive site and which will not attract land fill or aggregate taxes
- Station boxes will be excavated in advance of TBM arrival (TBM push through)
- A Geotechnical Baseline Report will be used

Costs NOT included

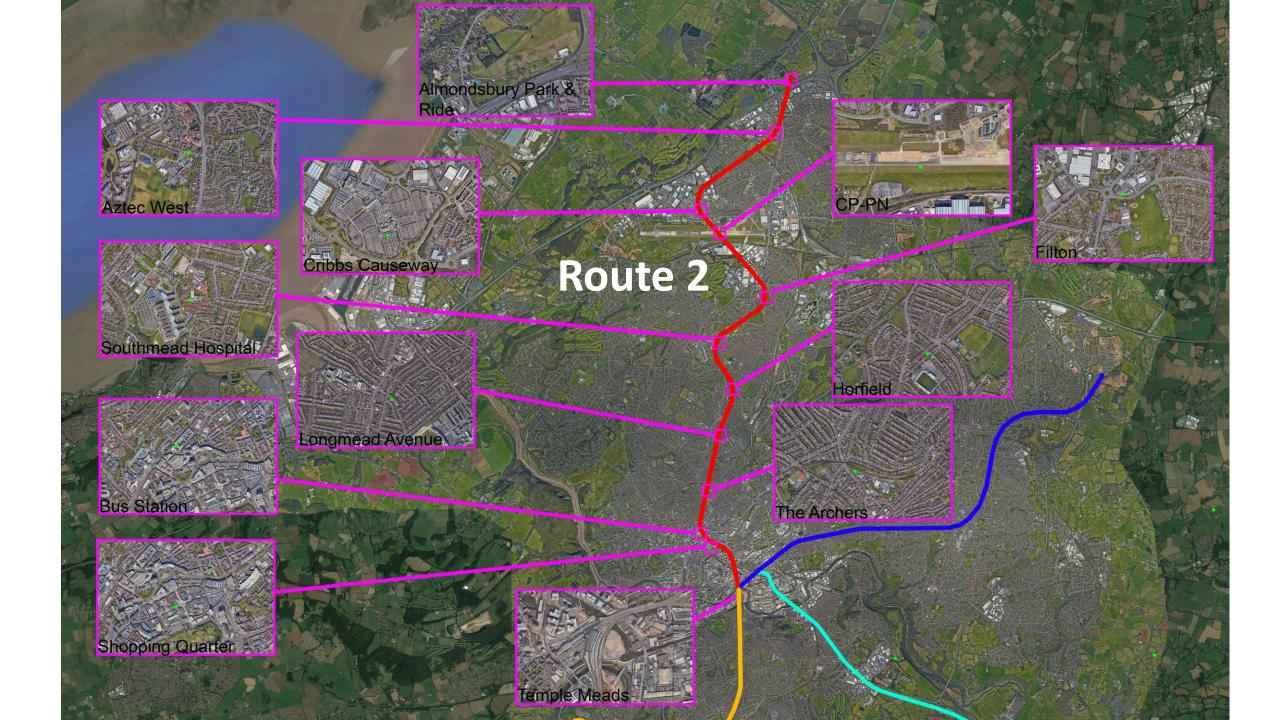

- Client costs
- Land / compulsory purchase costs
- Cost of the planning process
- Surveys ecology, archaeology etc.
- Service diversions at stations
- Electrical power supplies to tunnel drive sites
- Inflation (costs are Q3-23)
- Rolling stock
- Optimism bias

Combined Cost

(assuming four routes are constructed underground)

Single Tunnel - Twin Track	
Combined Construction (assuming four JVs)	£3,596,693,787
Combined Design	£155,000,000
Total	£3,751,693,787

Twin Tunnel - Single Track	
Combined Construction (assuming four JVs)	£3,752,146,756
Combined Design	£160,000,000
Total	£3,912,146,756
